

# Introducing the New Generation PathScan Enabler IV

Obtain Ultra High Resolution  
Images from 1 x 3 glass tissue  
slides in about a minute . . .

***Without a microscope!***

Tissue Slide

The New PathScan Enabler IV is a perfect compliment to any microscope imaging workstation. Thousands have been sold since the original design of 1995!

The PathScan Enabler IV is designed to allow scanning of whole mounted histological samples attached to standard 1 x 3 inch cover slipped glass slides. The PathScan Enabler IV solves low power, large field of view, high resolution imaging problems. Scan area is 1.423 x 0.85 inches, resulting in ***stunning, incredible images up to 10,248 x 6120 pixels!*** The PathScan Enabler IV holds two (2) 1 x 3 inch glass slides and includes simple use one touch QuickScan software, as well as SilverFast Ai software for advanced users. Image files are saved in TIFF or JPEG formats. JPEG, GIF, etc. This instrument will not replace a microscope and digital camera. Equivalent to 50x resolution.

Compatible with Windows based PC's and Mac Computers -- One year warranty. Patent pending.
