

FSM25 LX Fluorescence Stereo Microscope

The FSM25 Stereo Fluorescence System features a Greenough Stereo System base creating an efficient and easy to use stereo fluorescence microscope at an incredibly low price. This system is ideally suited for sorting, screening and teaching. Our suggested system is set up for GFP fluorescence and includes a custom COOLED light source, and GFP filter sets for bright GFP fluorescence images. The FSM25 LX systems are built on top of Kramer's own LED transmitted light base with 31 different levels of transmitted light for your own customization. The FSM25 also features long working distance optics making this microscope perfect for sorting, picking quickly and easily without having to change your microscope settings.
